Summary

Senior tech enthusiast with 7+ years of experience, passionate about building engineering solutions and innovation to generate material business impact. Built an entire startup technical stack which became a successful business. Being the first developer in a startup, I managed more than 20 members of strong cross-platform teams to build products that ensure customer delight. Experienced in a wide range of technologies - specializing in developing high performance and scalable web platforms, capable of catering to heavy traffic. Highly motivated, reliable, analytical problem solver and focused troubleshooter paying stronger attention to the details.

Specialized in:

- Front-end development using HTML5, CSS3, jQuery, Angular.
OTT application development using front-end technologies to support across multiple platforms such as Tizen, Orsay, WebOS, Xbox One, etc.,
- Various open source technologies like Ruby on Rails, PHP, Python, MySQL, NoSQL.
Deployment and maintenance of application with CI/CD in Cloud Infrastructure (AWS, Heroku)
- Payment gateway integration - Stripe, 2checkout, Paypal, Citrus, Razorpay.
- AWS modules like EC2, S3, Elastic Beanstalk, Elastic Load Balancer, Route 53, CloudFront, ElastiCache, DynamoDB, RDS, Simple Email Service (SES), Elastic Transcoder, IAM, OpsWorks, Lambda and API Gateway.
- Sketch, Adobe Creative Suite (producing mock-ups and creating HTML5, CSS3, jQuery templates with responsive & adaptive).
- Project management tools like JIRA, Confluence, Bitbucket, Fisheye, trello.

Experience

Lead Software Engineer at Coda Global

December 2017 - Present (1 year 5 months)

- Built and led multi-disciplinary teams through product strategy, branding, interaction design, visual design, prototyping and design research.
- Led user interface engineering team, we are responsible for all front-end technologies and implementation of all the projects.
- Designed and developed more than 4 standalone product design and prototyping. (Sketch, HTML5, Angular, Raphaël.js)

Vice President of Engineering at HeroTalkies

YuppTV acquired HeroTalkies

September 2014 - December 2017 (3 year 4 months)

- Architected & developed scalable full stack application from scratch within 3 Months using Ruby on Rails with AWS cloud, including highly consumable RESTful APIs.
- Managed a 10+ member team, responsible for end-to-end Product Management. Launched 10 different applications like Web, iOS, tvOS, Android, Amazon Fire TV, Android/Google TV, Tizen, Orsay, WebOS, Roku & Chromecast/Airplay.
- Developed end-to-end OTT platform components like content management, subscription management (SVOD), pay per view management (TVOD), concurrent streaming, payback restrictions, etc.
- Architected & managed application with CI/CD in Amazon Web Services with fault tolerance.
- Developed hybrid application framework to support multiple Smart TV platforms like Tizen, Orsay, WebOS, etc.
- Developed an advanced tracking mechanism to monitor & analyse users playback experience and recommendation.
- Developed a custom ingest management service with Amazon Cloudfront (CDN) then transitioned to Akamai & Brightcove later.

- Specialized in third-party tools integration - Including payment gateways like Stripe, 2checkout, Paypal, Citrus & Payzippy, and Marketing automation tools like Mixpanel, Referralsaasquatch, Optimonk.
- Managed end-to-end product life cycles for all platforms using agile methodology. Worked closely with marketing team to improve and modify the processes for acquisition, retention and re- targeting users.
- Developed & managed other services like transcoders, blog, marketing email services, etc.

Consultant at Avnet Services: IBM Practice (formerly Ascendant Technology)

Sirius Computer Solutions acquired Avnet Services: IBM Practice (formerly Ascendant Technology)
September 2013 - August 2014 (1 year)

- Worked on hybrid application development for iOS and Android using IBM Worklight.
- Worked on UI development in various WebSphere Portal projects.
- Designed & developed various in-house projects.

Senior Web Designer at Asahi Technologies

July 2012 - September 2013 (1 year 3 months)

- Responsible for requirements gathering from Clients and transforming them into pixel perfect designs.
- Delivered a pixel-perfect, cross-browser, hand-coded HTML5/CSS3/JavaScript/jQuery templates for a number of in-house and client web-based projects (Mycoop, FedEx SRI, Whysciencenow, Education Modified etc.)
- Developed interactive components using jQuery as well as implementing existing jQuery plugins.

Education

Kongu Engineering College

Bachelor of Engineering (BE) in Computer Science (2009 - 2012)

P.A Polytechnic College

Diploma in Computer Science (2006 - 2009)
